

# np-Export

## Off-line Viewer for Documentum

### np-Export IDEA

np-Export, a Documentum add-on application, publishes all documents ad-hoc from the Documentum Docbase directly onto a CD, DVD or other electronic media. You can use the CDBuilder to easily extract documents from a Docbase and publish them on electronic media. np-Export extracts all types of documents, attributes or renditions while allowing you to export complete virtual documents and folder structures to CD. This means that you can not only publish just the content, but also the corresponding documentation information. Then the user can use the CDViewer to inspect these documents and their attributes quickly and efficiently, search for specific documents or navigate in the directory structure.

### BENEFITS

- publication on all available electronic media
- a wide variety of and selective extraction tools that don't require a lot of time and effort
- your documents are mobile without having to check them out of the Docbase
- an encoding option
- can be used on all media
- it supports all Documentum servers on a wide range of platforms

### EXTRACTION OPTIONS

#### File- and Inquiry-Based Extraction:

np-Export gives you the option for a file- or inquiry-based extraction so that the user can transfer a complete folder structure, virtual documents or individual documents to the desired electronic medium by means of a DQL inquiry.

### Extraction Settings:

You have other options for extracting specific documents. Take the extraction menu that allows you to select all attributes or specify individual ones. You can also adjust the settings and size of the targeted electronic medium with the configuration. In addition, np-Export allows you to select the renditions you want to extract. Finally, you can encode the documents, attributes or renditions to be exported providing

data security through a definable code for encryption and decryption.

### Profiles:

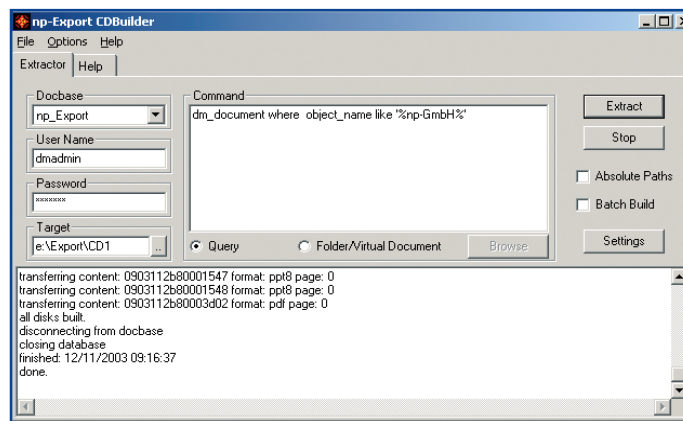

You can save all settings that define document export in what are known as profiles. They are especially useful if you export the same documents several times because you only have to adjust the settings once.

### Command Line CDBuilder:

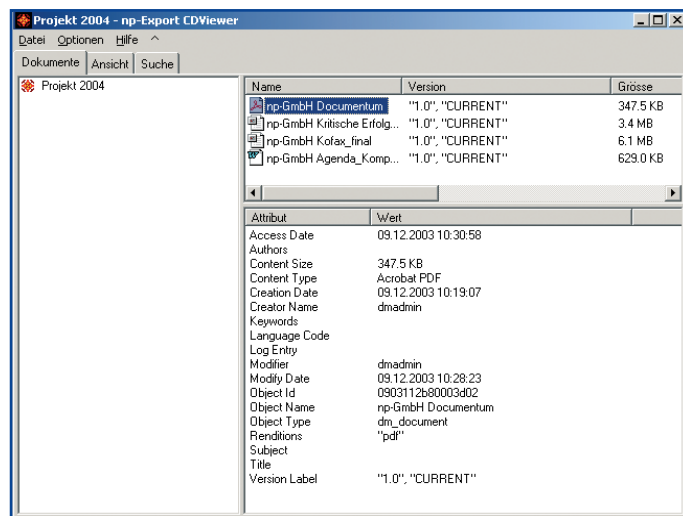

Starting with np-Export Version 1.4, this package also contains a command line version of the CDBuilder. This command line exporter allows you to automate creating the CD with batch processing and scripting and create CD images as per the information deposited in the profile file.

### SYSTEM REQUIREMENTS

- Intel Pentium II processor (or higher)
- 64 MB RAM minimal
- 10 MB free memory space
- Windows XP Professional (Service Pack 1 or higher). Windows 2000 Professional (Service Pack 2 or higher) or Windows NT 4.0 (Service Pack 3 or higher)
- Acrobat Reader 4.0 (or higher)
- Microsoft Java VM
- Disk space for export files

The Client of np-Export: the CDBuilder exports documents from the Documentum Docbase

Viewing the CD: the user can use the CDViewer to inspect the documents without the Documentum Client
